

CHEDALLA GOPALA KRISHNA SRI HARSHA

Platform Engineer Intern

📞 7893771551 ✉ chedallaharsha3412@gmail.com 🔗 in/chedalla-sriharsha-9a411225a 📍 India

SUMMARY

Innovative platform engineer with a B.Tech in Electrical Engineering, specializing in Linux kernel optimization and AI-powered NLP model development. Expertise in leveraging deep learning frameworks like Pytorch to build intelligent solutions while improving system resource utilization and scalability. Strong foundation in kernel internals and performance tuning, balancing system robustness with cutting-edge AI integration

EXPERIENCE

Platform Engineer Intern

Samsung R and D

📅 01/2025 - 07/2025 📍 Delhi

Samsung Research and Development focused on advancing technology, particularly in Linux OS

- Internship focused on Linux OS platform stability, security, and kernel optimization.
- Enhanced system security and stability by analyzing and patching multiple CVEs in the Linux kernel source code, strengthening vulnerability management processes.
- Optimized OS performance by 20% through strategic kernel configuration, memory footprint reduction, and system parameter fine-tuning.
- Developed custom Linux OS builds using Meson 4.9, integrating updated kernel modules and drivers to meet specific platform requirements.
- Improved memory efficiency by debugging and optimizing Kernel Samepage Merging (KSM), enhancing memory deduplication and resource utilization.
- Conducted comprehensive testing using VDbench, VDLTP, and Auto Touch suites to validate filesystem integrity, performance benchmarks, and system reliability.
- Deep-dived into Linux internals, working with kernel memory management, KSM implementation, and platform-level build processes.

EDUCATION

B.Tech in Electrical Engineering

National Institute of Technology, Durgapur

📅 08/2021 - 05/2025 📍 Durgapur

CGPA
8.28 / 10.0

Class XII

Board of Intermediate Education

📅 06/2019 - 05/2021 📍 Andhra Pradesh

Percentage
98.2 / 100

Class X

Board of Secondary Education

📅 06/2018 - 05/2019 📍 Andhra Pradesh

GPA
10.0 / 10.0

SKILLS

Linux	C++	Python		
Deep Learning		NLP	Bash	Git
LSTM	Numpy	Pytorch	HTML	
CSS	Bootstrap	Data Structures		
OOP	SQL	Pandas		
Shell Scripting		RNN	RAG	

PROJECTS

Real-Time Emotion Detection from Voice using RNNs

📅 05/2025 - 06/2025

Real-Time Emotion Detection from Voice

- Built an intelligent emotion classification system that detects human emotions (happy, sad, angry, etc.) from voice in real-time using an LSTM-based RNN architecture.
- Engineered an audio processing pipeline extracting MFCC features from live microphone input using Librosa and trained the model on the RAVDESS dataset for accurate emotion recognition.
- Achieved high accuracy by leveraging sequential modeling techniques optimized for time-series audio data, demonstrating practical application of deep learning.
- Tech Stack: Python, Pytorch, Librosa, NumPy, LSTM Networks.

Next-Word Prediction and Smart Autocomplete using RNNs

📅 05/2025 - 06/2025

Next-Word Prediction and Smart Autocomplete

- Built an intelligent autocomplete system that predicts the next word in real-time using LSTM-based language modeling, similar to Google Docs and messaging apps.
- Trained a custom NLP model on large text corpus (Wikipedia, news articles) with advanced preprocessing including tokenization, padding, and sequence generation.
- Tech Stack: Python, Pytorch, NLTK, LSTM Networks, Word Embeddings, NLP.
